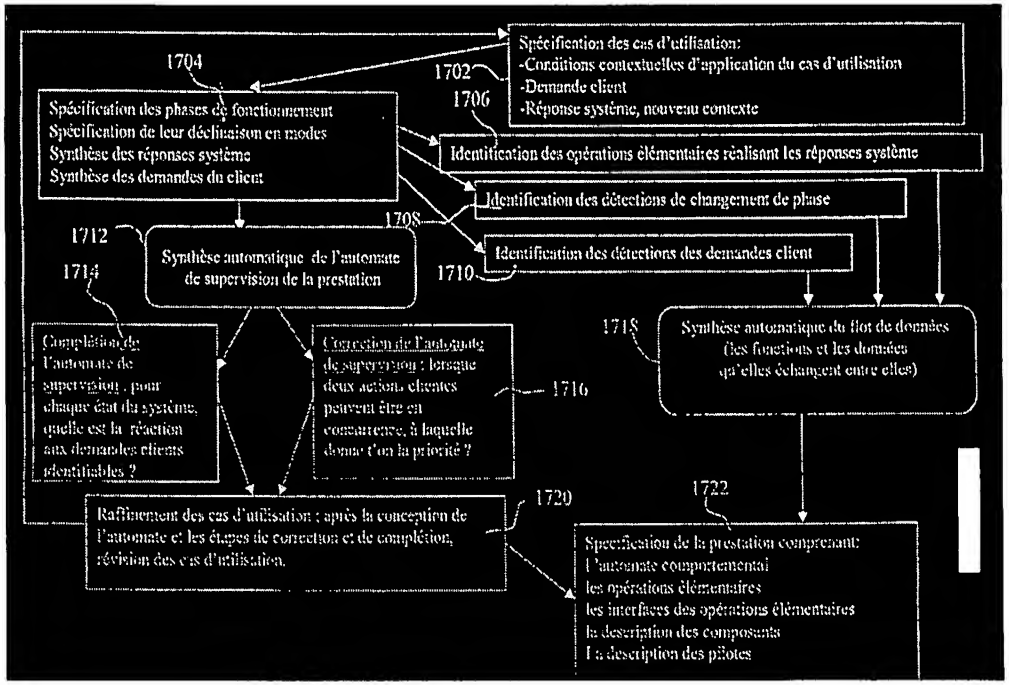

Figure 17

1702	Specification of use cases: - Contextual conditions of application of the use case - Client request - System response, new context	1716	Correction of the supervising automaton: when two client actions may be competing, which is given priority?
1704	Specification of operating phases Specification of their declinations in mode Synthesis of system responses Synthesis of client requests	1718	Automatic synthesis of the data flow (the functions and the data that they exchange with one other)
1706	Identification of elementary operations for executing the system responses	1720	Refinement of use cases: after design of the automaton and the steps of correction and supplementation, revision of use cases.
1708	Identification of detections of phase change	1722	Specification of the service comprising: the behavior automaton the elementary operations the interfaces of the elementary operations the description of the components the description of the drivers
1710	Identification of detections of client requests		
1712	Automatic synthesis of the automaton for supervision of the service		
1714	Supplementation of the supervising automaton: for each system state, what is the reaction to identifiable client requests?		

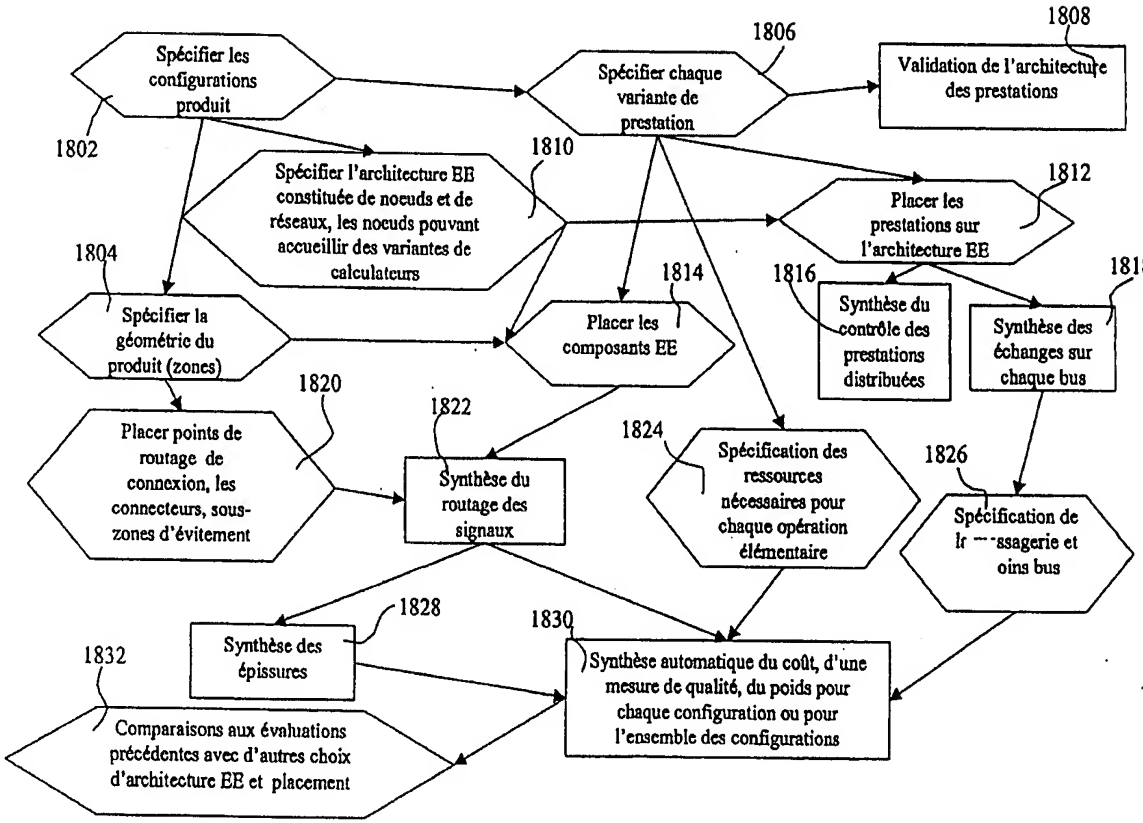

Figure 18

1802 Specify the product configurations
1804 Specify the product geometry (zones)
1806 Specify each service variant
1808 Validation of the service architecture
1810 Specify the electrical and electronic architecture composed of nodes and networks, the nodes being able to receive calculator variants
1812 Map the services onto the electrical and electronic architecture
1814 Map the electrical and electronic components
1816 Synthesis of control of distributed services
1822 Synthesis of routing of signals
1824 Specification of resources necessary for each elementary operation
1826 Specification of the electronic messaging service and bus needs
1828 Synthesis of splices
1830 Automatic synthesis of the cost, of a measure of quality, and of the weight for each configuration or for the set of configurations
1832 Comparisons with the preceding evaluations using other choices of electrical and electronic architecture and mapping
